

## Press release

### **Multijob MJX 360° complete rotation Backhoe-loader Selected by Sandvik and Neotec**

The earth moving equipment developed by **HAULOTTE, MULTIJOB MJX**, a continuous rotation backhoe loader (360°) has been selected by **SANDVIK\*** for its "Grizzly breaker" application, and thanks to **NEOTEC** know-how the MULTIJOB MJX has road-rail application.

**SANDVIK, world-leader in high technology products**, offers solutions for many applications in the construction industry, including surface rock excavation, tunnelling, demolition, recycling and road resurfacing, the Group has worked with **NEOTEC** to adapt the **MJX** to meet its specific requirements. Neotec, a French company, set up to provide research and services to the top vehicle manufacturers, has strategically reoriented its activity to focus on these particular construction applications. 80% of its business concerns the design and manufacture of machines and special equipment in these sectors.

Definitively versatile, the **MULTIJOB MJX** offers as standard a telescopic loader, a full rotation excavator, 4 wheels drive and steering, quick attachment of shovel and digger sides with translation and steering on both working positions.

The "Grizzly breaker" application is a really good fit with the **MJX**. Thanks to its features (versatility, robustness, capability in all situations) the MJX become a new tool for some specific works like in a coal power station. Neotec has adapted the machine for rail road; the MJX "Grizzly breaker" will operate on a 24 hours a day, 365 days a year, whatever the weather condition, to improve the flow of coal as it is unloaded from the train.

On the loader side a wide harrow improves the flow of the coal stream towards conveyors and on the excavator side, its versatility means it accepts cutting tools or hydraulic crowbars which reduce the unrefined coal which can not pass on conveyors. The quantity managed could reach 2 200 tons per hour, which means one train every 13 minutes.

The MJX is definitively a versatile machine!

**\*Sandvik is a high-technology engineering group, with advanced products and world-leading positions in selected niches. Operations comprise the Tooling, Mining and Construction, and the Materials Technology business areas. The Group has 50,000 employees, representation in 130 countries, with annual sales of approximately SEK 93 billion.**

Since its founding in Sandviken in Sweden in 1862, Sandvik has developed into a global enterprise, with a multifaceted expertise in the field of materials technology. The business philosophy has been largely the same through the years: Sandvik shall be the leader in selected areas. Products are based on high value content and are developed in close cooperation with customers. Quality is the guiding principle in the global operations
